

# **North Carolina HIV/STD Surveillance Report: Vol. 2001, No. 4**

## **Epidemiology & Special Studies Unit**

HIV/STD Prevention and Care Branch  
Epidemiology Section  
Division of Public Health, NCDHHS

1902 Mail Service Center  
Raleigh, North Carolina 27699-1902  
(919) 733-7301

North Carolina law requires that diagnoses of certain communicable diseases including sexually transmitted disease (STD)s be reported to local health departments which in turn report the information to the state. The Epidemiology and Special Studies Unit (ESSU) is the designated recipient for STD disease reports at the state level and is responsible for aggregating reports and providing statewide information about these diseases to others including the Centers for Disease Control and Prevention (CDC) in Atlanta, Georgia. The ESSU is part of the HIV/STD Prevention and Care Branch within the North Carolina Division of Public Health.

The *North Carolina HIV/STD Surveillance Report: Vol. 2001, No. 4* presents statistics and trends of Sexually Transmitted Diseases (including HIV and AIDS) in North Carolina from January 1, through December 31, 2001. Some 2000 data is also presented as a reference. All reports are sorted by the date received (by the ESSU). This report is intended as a reference document for local health departments, program managers, health planners, researchers and others who are concerned with the public health implications of these diseases. The information in this report is meant to be brief and provide limited data on these diseases throughout the year. More detailed and complete information will continue to be available in annual publications. This report and other annual publications are available on our website ([www.schs.state.nc.us/epi/hiv/surveillance.html](http://www.schs.state.nc.us/epi/hiv/surveillance.html)). The CDC maintains data about these diseases for the United States and national information is available from its website ([www.cdc.gov](http://www.cdc.gov)).

### **NOTES:**

All reporters are encouraged to submit STD reports in a timely and accurate manner to facilitate the publication of our state surveillance reports and the submission of reports to the CDC in Atlanta. Reporters are also encouraged to enter complete information on morbidity reports especially race/ethnicity and agency and reporter information. Please avoid the use of acronyms and abbreviations as they can be difficult to interpret.

We are pleased to announce that two new factsheets, *Health Disparities and Trends in HIV/STD/AIDS* and *HIV/AIDS Deaths in North Carolina*, are now available on our website ([www.schs.state.nc.us/epi/hiv/surveillance.html](http://www.schs.state.nc.us/epi/hiv/surveillance.html) ). The dramatic increase noted in AIDS cases reported for 2001 will be addressed in an upcoming factsheet.

If you have questions or comments, please contact us at the address or phone number above.

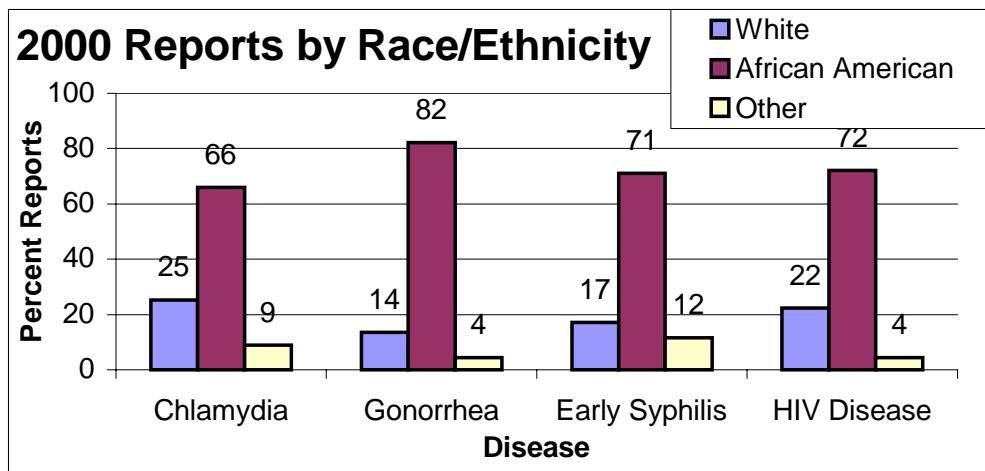

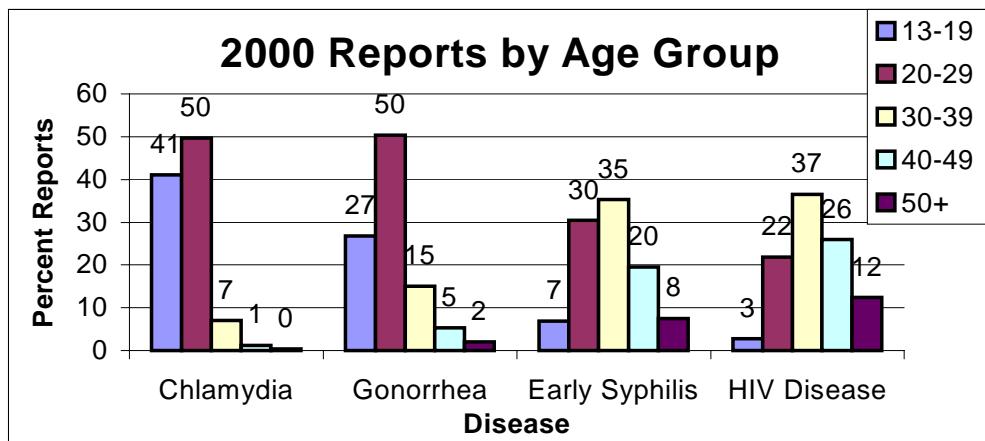

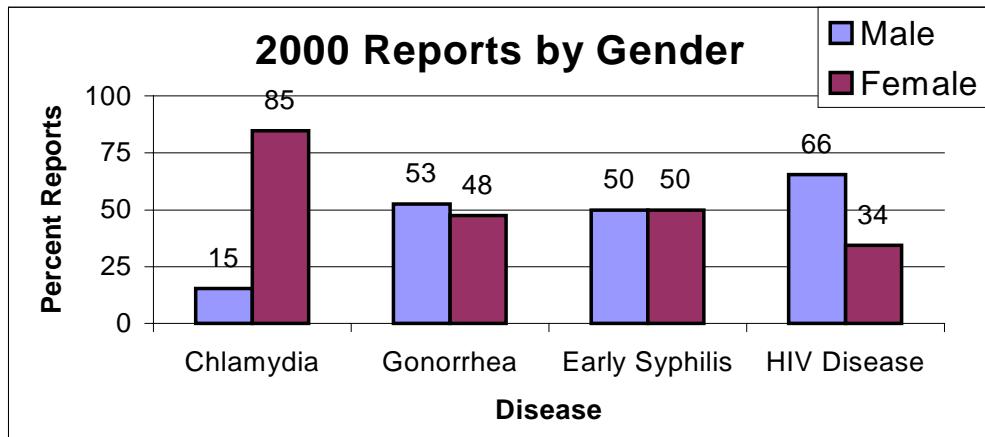

This document was revised on February 19, 2002

## 2000 Reports

Below are graphs of 2000 STD Reports by sex, age group, and race/ethnicity. These graphs can be used as a reference when viewing the current year data. Please note that HIV Disease includes HIV and AIDS Reports.

## Syphilis

Syphilis is an acute and chronic disease caused by infection with *Treponema pallidum*. Infection with syphilis can facilitate HIV transmission by 2 to 5 fold and cause congenital syphilis in pregnant women. Congenital syphilis can cause stillbirths and result in lifelong health problems for the child. In 2000, 483 cases of primary and secondary syphilis were reported in North Carolina. According to the CDC, the incidence of primary and secondary syphilis ranked North Carolina 2<sup>nd</sup> in the nation with a rate of 6.3 cases per 100,000 population.<sup>1</sup> The 2000 North Carolina rate was almost three times the national rate of 2.2 cases per 100,000 population.<sup>1</sup> In the table below is the 2001 report data for syphilis which includes early latent syphilis.

## Gonorrhea

Infections due to *Neisseria gonorrhoea* remain a major cause of pelvic inflammatory disease, tubal infertility, ectopic pregnancy, and chronic pelvic pain in the U.S. Epidemiologic studies provide strong evidence that gonococcal infections facilitate HIV transmission. Reporting of gonococcal infections has likely been biased towards reporting infections in persons of minority race or ethnicity who attend public STD clinics. In 2000, 17,996 cases of gonorrhea were reported in North Carolina. According to the CDC, the rate of infection (NC) was 233.0 per 100,000 population.<sup>1</sup> In 2000, North Carolina's rate ranked it 5<sup>th</sup> in the nation when the national rate was 131.6 per 100,000 population.<sup>1</sup>

## Chlamydia

Infections due to *Chlamydia trachomatis* are among the most prevalent of all sexually transmitted diseases. In women, these infections often result in pelvic inflammatory disease, which can cause infertility, ectopic pregnancy, and chronic pelvic pain. In 2000, 22,177 cases of chlamydia were reported in North Carolina. According to the CDC, the rate of infection (NC) was 287.4 per 100,000 population.<sup>1</sup> In 2000, North Carolina was ranked 14<sup>th</sup> in the nation when the national rate was 257.5 per 100,000 population.<sup>1</sup>

## HIV Disease

Infection with human immunodeficiency virus (HIV) generally causes progressive damage to the immune and organ systems, including the central nervous system and leads to a more severe life-threatening clinical condition called AIDS (acquired immunodeficiency syndrome). Most reports are initially received as HIV cases, but some reports are first received as AIDS cases.

The tables below include **both** and the disease reports are categorized by the **date of first report**. In 2000, there were 1,467 reports of HIV disease in North Carolina.

## AIDS

Acquired immunodeficiency syndrome (AIDS) is a life-threatening clinical condition caused by the progression of HIV disease. In recent years, the number of AIDS cases has dropped most likely because of the availability of new highly effective antiretroviral treatments for persons with HIV disease. The reports below are of AIDS cases\* sorted by the **date of report for an AIDS diagnosis**. In 2000, there were 683 AIDS cases reported in North Carolina.
